The City of Tacoma Safe Routes to School (SRTS) program works to make it safer, more convenient, and fun for K-12 students and families to walk, bike, and actively roll to school through:

- targeted infrastructure improvements,
- walking and biking safety education, and
- encouragement programs.

The SRTS Program prioritizes schools using crash and equity data. The school prioritization analysis is available in the 2017 SRTS Action Plan.

The Manitou Park Elementary SRTS improvements will start construction in summer 2023 along S 66th St between S Tyler and S Cheyenne streets. The improvements below may adjust slightly between now and time of construction.

**Along S 66th St:**
- Protected bike lanes with mounted vertical delineators on both sides of the street

**S 66th St and S Stevens St:**
- Raised crosswalk (like a speed hump, but with a flat crosswalk on the top, also known as a speed table).
- RRFBs (really bright flashing lights when you push the button)
- New ADA curb ramps

**Connecting to Tyler:**
- New directional tiles on the bike ramps.
- Directional tiles provide guidance for people who are Blind or low-vision. The tiles help distinguish the bike ramp from a pedestrian curb ramp at a crosswalk.
