APPENDIX A – TECHNICAL SPECIFICATION

Technical Specifications

Technical Specifications: 15 kV Copper Bus Duct

Scope of Work:

This specification establishes a three (3) year supply contract with the option to extend up to three (3) additional one-year periods upon mutual consent between parties, for the design, production, and delivery of outdoor type NEMA 3R, non-segregated (No substitute), 3 phase, 4 wire, copper bus duct to mate transformer with 15kV switchgear.

For each purchase order, a typical bus duct length is approximately 10 lineal feet with two 90 degrees bends (See attached 'For Reference' outline drawing). The city may initially place three purchase orders for three different projects. The provided layout (See attached 'For Reference' outline drawing) is intended for estimating purpose only.

1. Requirements:

The design and material of the bus duct shall comply with all applicable codes, recommended practices, and latest amended standards of ANSI, NEMA, and IEEE Std C37.23-2015. In case of conflict between standards, the higher standard shall prevail. All bus duct components shall be UL certified.

1.1. Bus

The bus shall be 99 percent conductivity copper with tin- or silver-plated joints capable of carrying the rated continuous current without exceeding a temperature rise of 65 degrees Celsius, based on a 40 degrees Celsius ambient temperature.

The copper bus shall be mounted and supported on porcelain insulators that shall withstand the forces due to momentary short circuit currents as listed per the City Engineer on specific projects. Each bus bar shall be epoxy insulated (fluidized bed epoxy) over its entire length except joint parts.

Joints shall be insulated with removable boots (InsulBoot or approved equal) and jointed by double splice plates. They shall also be designed to withstand the vibration at the terminals as well as expansion and contraction of the busbars.

The insulation shall be seamless to prevent infiltration of water and moisture. It shall also be flame-retardant to ensure safety in case of fire.

A continuous ground conductor shall be provided in parallel with the primary conductors. The ground conductor may take the form of a separate bar, or the enclosure itself, if a continuous electrical path can be provided of the same momentary withstand current rating as the primary bus conductors. The ground conductor is preferably connected to the station ground at one point only, although more connection points are satisfactory if induced current loops have been avoided.

The throat shall include flexible tin- or silver-plated copper braid connectors from the phase and neutral buses to the transformer secondary bushings and all connecting hardware necessary for the connection to the transformer bushings.

Bus duct is used to connect new distribution transformer to existing metal clad switchgear.

1.2. Housing

The materials for the bus duct enclosure shall be sheet metal suitably supported. All covers and panels shall not be less than MSG No.14 (nominal thickness of 1.9 mm or 0.0747 in). Panels or covers used to support devices shall be increased in thickness or otherwise strengthened, as necessary to support devices. The housing shall meet outdoor NEMA 3R requirements and painted to provide maximum protection against corrosion from water and other contaminants.

All metal surfaces shall be protected from corrosion, the use of type 304 stainless steel or aluminum, constitute this protection without additional finishing. All hardware shall be stainless steel or aluminum, suitably protected to prevent corrosion.

The enclosure shall have access covers with provided handles for installation and maintenance. The access covers shall be made with aluminum only. The access covers shall meet outdoor NEMA 3R requirements and painted to provide maximum protection against corrosion from water and other contaminants. All hardware of access covers shall be aluminum only, suitably protected to prevent corrosion.

Flanges must be able to carry the structural load of the bus duct weight. The flanges shall be provided with gasket, nuts, bolts, spring washers, etc.

The flange (which will be connected to the transformer side) shall be pre-drilled with holes in the factory. However, the flange (which will be connected to the switchgear side) shall not be pre-drilled with holes.

1.3. Finishes and color.

All steel or aluminum surfaces to be painted shall receive a phosphatizing treatment or equivalent prior to application of paint. Painted internal surfaces shall be coated with at least one coat of corrosion-resisting paint. Painted external surfaces shall be coated with at least two coats of corrosion-resisting paint.

The paint color shall be ANSI 70 Sky Gray.

1.4. Heaters

Space heaters, in quantity and rating sufficient to minimize condensation shall be furnished. Heaters shall be controlled by a thermostat. They shall be rated at 240 volts, 500 W and operated at 120 volts for a prolonged life. Heaters shall be sized such that 120 volt operation provides ample heat to maintain a condensation-free environment. The heaters shall also be connected to terminal blocks for customer AC connection.

2. Ratings

The manufacturer shall design the bus duct according to the preferred ratings on Tables 2, 5, 8 and 10 of IEEE Std. C37.23.2015.

2.1. Rated maximum voltage:

15 kV, 3 phase, 4 wire.

2.2. Rated continuous current:

2000A.

2.3. Rated insulation levels:

Power frequency withstand for rated maximum voltage of 15 kV at 60 Hz for 1 minute shall be 36 kV and a BIL of 95 kV.

2.4. Rated short-time withstand current

20 kA

3. Qualification/ experience record

Manufacturer shall have specialized in the manufacturing and assembly of medium-voltage bus duct for ten (10) years or more in the United States. The Bidder shall be experienced in the design, manufacture, direct sale, and warranty service and support of this type of material or equipment (15 kV bus duct) to electrical utilities in the United States. The Bidder shall provide a record of successful delivery and performance over a period of ten (10) years or more in the United States. The City shall be the sole judge of the Bidder's ability to meet the requirements of this paragraph.

Evaluation of bidder proposals will be based on the following assumed quantities:

- a. Ten (10) lineal feet of custom bus duct
- b. Two (2) 90-degree bends
- c. One (1) custom design/engineering cost
- d. One (1) delivery charge for bus duct shipment to Tacoma Power Warehouse or Substation Site in Tacoma area, Washington State.

Certified drawings will be reviewed by City and processed as specified in this Section. Each drawing submitted, regardless of origin, shall be stamped with the approval of the Vendor and clearly marked with the name of the project, the specification title, the specification number, and the Vendor's name.

The Vendor's stamp of approval will be representation to the City that the Vendor has assumed full responsibility for determining and verifying all applicable information (i.e. quantities, dimensions, field construction criteria, materials, catalog numbers) and/or similar data, and that the Vendor has reviewed or coordinated each submittal with the requirements of the work and the contract.

If drawings submitted by the Vendor show variations from the contract requirements, the Vendor shall describe such variations in writing, separate from the drawings, at the time of submission.
