**Subject:** Final Non-Interim Regulations  
**Date:** Friday, June 18, 2021 5:13:20 PM

---

Dear IPS Committee, Mayor Woodards and remaining City Council Members,

We at 350 Tacoma are, as you know, very concerned about the final Non-Interim Regulations you expect to pass by the end of August. We understand the IPS Committee is meeting on 6/23 to discuss this. What do we want as Tacoma residents concerned about the climate? We want those final regulations to clearly prohibit ANY FURTHER EXPANSION OF FOSSIL FUELS by any current company in our Port or the Tideflats, and NO NEW FOSSIL FUEL COMPANIES, no matter how small. Our position is based on the climate scientists and their urgent pleas to immediately begin weaning off of fossil fuels. Time is not on our side any longer.

When you, Mayor Woodards, and the City Council Members passed Resolution No. 40509, there was an expectation that you all understood the climate emergency and would enact measures reflecting your science-based knowledge. And yet, when it came time to vote to stop fossil fuel expansion, 5 of you voted NO! That tells us that five of you do not have adequate education and information about the climate emergency we are facing and that our children and grandchildren will have to live through. That is scary, and unacceptable.

We have been asking the same thing of you for four years now. You know what we want. You know that hundreds of residents have asked the same thing. We have always been in the vast majority at any public hearing on the issue. So the question is, if you claim to represent the people, who are you hearing from and in what numbers, to have you vote against stopping fossil fuel expansion?

We do want to thank Mayor Woodards and Council Members Chris Beale, Kristina Walker and Catherine Ushka for your vote to stop expansion of fossil fuels. We hope that you are able to inform and influence other City Council Members to join you when it is time to finalize the regulations. Our future depends on this.

Sincerely,

350 Tacoma  
Daniel Villa  
Nichole Snyder  
Eileen Newton  
Nakanee Monique  
Juan La Torre

IPS Committee ,

Dear IPS Committee,

Our community has been asking the City to stop fossil fuel expansion for the past four years. We are asking yet again.

I was quite disappointed when the City Council failed to adopt the non-interim regulations as proposed by the City Planning Department. These would have included a ban on fossil fuel expansion. Just as in their first recommendation four years ago.

I also understand that some council members were poised to amend the non-interim regulations to death, and that is why the Mayor put it to a vote to send it to your committee. From my point of view, this is just further wheel spinning and delay to let industry do as it pleases. We don't need more studies or review - we know exactly what we need to do. So let's do it.

I hope you will prove me wrong by maintaining the ban on fossil fuel expansion as you do your own take on the non-interim regulations. Ideally, I'd ask that you include a ban on the establishment of any new fossil fuel industry, no matter the size (as I understand it anything under a million gallons is allowed).

Undoubtedly industry will turn to talk of biofuels to try and seek expansion of their facilities. It would be good for you to know that two refineries built for biofuels in the PNW ended up just processing fossil fuels in the end. If the fossil fuel companies are so keen to do biofuels, which are of questionable sustainability and scalability to my knowledge, then let them use whatever storage tanks they currently have. We don't want to be home to another refinery spewing toxins into our air, biofuel or not.

We need to start transitioning Tacoma away from fossil fuels or we'll be left behind and dealing with a toxic legacy when the rest of the country converts to green, renewable energy and industry. Why can't we attract a turbine manufacturer here? With the port and rail access it would be perfect for distribution.

Please remember that the City passed a climate emergency resolution. Banning fossil fuels is the next logical step. Then we need to start weaning off them, and rapidly. I noticed that the climate education promised in the Climate Emergency Resolution oddly didn't include Council Members - would be great to see you all insist on having that education for yourselves as well.

I hope you will deliver to us the fossil fuel regulations we need.

IPS Committee ,

Dear IPS Committee,

Our community has been asking the City to stop fossil fuel expansion for the past four years. We are asking yet again. I am only 20 years old and I don't know if I'll even need to worry about my lack of Social Security or the national debt because I don't know if I'll even see my 50th birthday due to climate change. I am from a generation of despair. Every new fossil fuel plant is another nail in my coffin and I want you to know that you wield the hammers. Please please please listen to your community and the science, no amount of profit or increase of jobs easily created elsewhere should be above the health of your citizens, children, environment and home. I beg you to follow your heart and make the right decision for all of us. We are counting on you.

Undoubtedly industry will turn to talk of biofuels to try and seek expansion of their facilities. It would be good for you to know that two refineries built for biofuels in the PNW ended up just processing fossil fuels in the end. If the fossil fuel companies are so keen to do biofuels, which are of questionable sustainability and scalability to my knowledge, then let them use whatever storage tanks they currently have. We don't want to be home to another refinery spewing toxins into our air, biofuel or not.

We need to start transitioning Tacoma away from fossil fuels. Why can't we attract a turbine manufacturer here? With the port and rail access it would be perfect for distribution.

Please remember that the City passed a climate emergency resolution. Banning fossil fuels is the next logical step. Then we need to start weaning off them, and rapidly. I noticed that the climate education promised in the Climate Emergency Resolution didn't include Council Members - would be great to see you all insist on having that education for yourselves as well.

I hope you will deliver to us the fossil fuel regulations we need.

IPS Committee ,

Dear IPS Committee,

Our community has been asking the City to stop fossil fuel expansion for the past four years. We are asking yet again.

I was quite disappointed when the City Council failed to adopt the non-interim regulations as proposed by the City Planning Department. These would have included a ban on fossil fuel expansion. Just as in their first recommendation four years ago.

I also understand that some council members were poised to amend the non-interim regulations to death, and that is why the Mayor put it to a vote to send it to your committee. From my point of view, this is just further wheel spinning and delay to let industry do as it pleases. We don't need more studies or review - we know exactly what we need to do. So let's do it.

I hope you will prove me wrong by maintaining the ban on fossil fuel expansion as you do your own take on the non-interim regulations. Ideally, I'd ask that you include a ban on the establishment of any new fossil fuel industry, no matter the size (as I understand it anything under a million gallons is allowed).

Undoubtedly industry will turn to talk of biofuels to try and seek expansion of their facilities. It would be good for you to know that two refineries built for biofuels in the PNW ended up just processing fossil fuels in the end. If the fossil fuel companies are so keen to do biofuels, which are of questionable sustainability and scalability to my knowledge, then let them use whatever storage tanks they currently have. We don't want to be home to another refinery spewing toxins into our air, biofuel or not.

We need to start transitioning Tacoma away from fossil fuels or we'll be left behind and dealing with a toxic legacy when the rest of the country converts to green, renewable energy and industry. Why can't we attract a turbine manufacturer here? With the port and rail access it would be perfect for distribution.

Please remember that the City passed a climate emergency resolution. Banning fossil fuels is the next logical step. Then we need to start weaning off them, and rapidly. I noticed that the climate education promised in the Climate Emergency Resolution oddly didn't include Council Members - would be great to see you all insist on having that education for yourselves as well.

Ideally, I'd ask that you include a ban on the establishment of any new fossil fuel industry, no matter the size (as I understand it anything under a million gallons is allowed).

Undoubtedly industry will turn to talk of biofuels to try and seek expansion of their facilities. It would be good for you to know that two refineries built for biofuels in the PNW ended up just processing fossil fuels in the end. If the fossil fuel companies are so keen to do biofuels, which are of questionable sustainability and scalability to my knowledge, then let them use whatever storage tanks they currently have. We don't want to be home to another refinery spewing toxins into our air, biofuel or not.

We need to start transitioning Tacoma away from fossil fuels or we'll be left behind and dealing with a toxic legacy when the rest of the country converts to green, renewable energy and industry. Why can't we attract a turbine manufacturer here? With the port and rail access it would be perfect for distribution.

Please remember that the City passed a climate emergency resolution. Banning fossil fuels is the next logical step. Then we need to start weaning off them, and rapidly. I noticed that the climate education promised in the Climate Emergency Resolution oddly didn't include Council Members - would be great to see you all insist on having that education for yourselves as well.

I hope you will deliver to us the fossil fuel regulations we need.

IPS Committee ,

Dear IPS Committee,

Our community has been asking the City to stop fossil fuel expansion for the past four years. We are asking yet again.

I was quite disappointed when the City Council failed to adopt the non-interim regulations as proposed by the City Planning Department. These would have included a ban on fossil fuel expansion. Just as in their first recommendation four years ago.

I also understand that some council members were poised to amend the non-interim regulations to death, and that is why the Mayor put it to a vote to send it to your committee. From my point of view, this is just further wheel spinning and delay to let industry do as it pleases. We don't need more studies or review - we know exactly what we need to do. So let's do it.

I hope you will prove me wrong by maintaining the ban on fossil fuel expansion as you do your own take on the non-interim regulations. Ideally, I'd ask that you include a ban on the establishment of any new fossil fuel industry, no matter the size (as I understand it anything under a million gallons is allowed).

Undoubtedly industry will turn to talk of biofuels to try and seek expansion of their facilities. It would be good for you to know that two refineries built for biofuels in the PNW ended up just processing fossil fuels in the end. If the fossil fuel companies are so keen to do biofuels, which are of questionable sustainability and scalability to my knowledge, then let them use whatever storage tanks they currently have. We don't want to be home to another refinery spewing toxins into our air, biofuel or not.

IPS Committee ,

Dear IPS Committee,

To stop the fossil fuel expansion in Tacoma is a big necessity.

I remember someone from the city council a while ago saying that they were hoping for more people coming to give their opinion about the issue of fossil fuels, not just the same group that usually do so. Well guess what? The average people who take their time waiting for their turn to speak for 90 seconds is the people who belong to many different organizations in Tacoma and are actually concern about the problems of the city, and the contamination of air, water and soil are not an exception.

I certainly hope that the political motivation is not the only cause for some Council Members to vote on favor of the ban of the fossil fuel expansion once and for all, and after a major consideration all of them show as much concern for the future of the city as well.

I know it's about time that every company who is interested in working in the city will have to get adapted to the stronger environmental regulations that this city council should create and strongly enforce, including of course a big welcome to all of them who are already using alternative energies.

Please remember that the City passed a climate emergency resolution. Banning fossil fuels is the next logical step.

I hope you will deliver not only to the citizens of Tacoma, but the whole country the satisfaction of knowing that wise citizens like ours are doing the correct thing for a better, healthy environment . Thank you.

IPS Committee ,

Dear IPS Committee,

Our community of citizens aware of the destructiveness of fossil fuels has been asking the City to stop fossil fuel expansion for the past four years. We are asking yet again.

I was quite disappointed when the City Council failed to adopt the non-interim regulations as proposed by the City Planning Department. These would have included a ban on fossil fuel expansion. Just as in their first recommendation four years ago.

I also understand that some council members were poised to amend the non-interim regulations extensively, and that is why the Mayor put it to a vote to send it to your committee. From my point of view, this is just a delay in which industry will do as it pleases. We do not need more studies or review - we know exactly what we need to do. So let's do it.

I hope you will maintain the ban on fossil fuel expansion as you do your own take on the non-interim regulations. I ask that you include a ban on the establishment of any new fossil fuel industry, no matter the size (as I understand it anything under a million gallons is allowed).

Undoubtedly industry will turn to talk of biofuels to seek expansion of their facilities. In considering them, you should know that two refineries built for biofuels in the PNW ended up just processing fossil fuels in the end. If the fossil fuel companies are so keen to do biofuels, which—as far as is known—are of questionable sustainability and scalability, then they may use the storage tanks they currently have. We don't want to be home to another refinery spewing toxins into our air, biofuel or not.

Tacoma must transition away from fossil fuels or be left behind and dealing with a toxic legacy when the rest of the country converts to green, renewable energy and industry. Why can't a turbine manufacturer be attracted here? With the port and rail access it would be perfect for distribution.

Please remember that the City passed a climate emergency resolution. Banning fossil fuels is the next logical step. Then we need to start weaning off them, and rapidly. I noticed that the climate education promised in the Climate Emergency Resolution oddly didn't include Council Members - it would be great for you to include yourselves as well.

I hope you will deliver to Tacoma the fossil fuel regulations that we and the world need.

**Date:** Monday, June 21, 2021 8:33:11 PM

---

IPS Committee ,

Dear IPS Committee,

Our community has been asking the City to stop fossil fuel expansion for the past four years. We are asking yet again.

I was quite disappointed when the City Council failed to adopt the non-interim regulations as proposed by the City Planning Department. These would have included a ban on fossil fuel expansion. Just as in their first recommendation four years ago.

I also understand that some council members were poised to amend the non-interim regulations to death, and that is why the Mayor put it to a vote to send it to your committee. From my point of view, this is just further wheel spinning and delay to let industry do as it pleases. We don't need more studies or review - we know exactly what we need to do. So let's do it.

I hope you will prove me wrong by maintaining the ban on fossil fuel expansion as you do your own take on the non-interim regulations. Ideally, I'd ask that you include a ban on the establishment of any new fossil fuel industry, no matter the size (as I understand it anything under a million gallons is allowed).

Undoubtedly industry will turn to talk of biofuels to try and seek expansion of their facilities. It would be good for you to know that two refineries built for biofuels in the PNW ended up just processing fossil fuels in the end. If the fossil fuel companies are so keen to do biofuels, which are of questionable sustainability and scalability to my knowledge, then let them use whatever storage tanks they currently have. We don't want to be home to another refinery spewing toxins into our air, biofuel or not.

We need to start transitioning Tacoma away from fossil fuels or we'll be left behind and dealing with a toxic legacy when the rest of the country converts to green, renewable energy and industry. Why can't we attract a turbine manufacturer here? With the port and rail access it would be perfect for distribution.

As an Everett resident who has had Dept. of Ecology soil remediation done in 2015, more than 100 years after 'our' Asarco smelter was shut down, I am deeply concerned for the health of all the residents in this area, indigenous, poor and working class, who are subjected to all the current and proposed emissions and toxic fumes affecting their lungs, hearts, and bloodstreams that will affect them and their children their whole lives. We must transition now for a cleaner future for all.

Please remember that the City passed a climate emergency resolution. Banning fossil fuels is the next logical step. Then we need to start weaning off them, and rapidly. I noticed that the climate education promised in the Climate Emergency Resolution oddly didn't include Council Members - would be great to see you all insist on having that education for yourselves as well.

I hope you will deliver to us the fossil fuel regulations we need.

IPS Committee ,

Dear IPS Committee,

Can we say it more clearly? No more fossil fuels for Tacoma.  
Our community has been asking the City to stop fossil fuel expansion for the past four years.  
We are asking yet again.

Have you been paying attention to the drought, the low water levels in containment dams, the stronger and more frequent extreme weather events? Do you see climate change profoundly affecting humans and other lives on the planet.

Yet the Tacoma City Council failed to adopt the non-interim regulations as proposed by the City Planning Department. These would have included a ban on fossil fuel expansion. Just as in their first recommendation four years ago.

Every community must be responsible actors in addressing climate change and the burning of fossil fuels that add to the planet's warming.

Saving us from the worst devastations of climate change should not be a partisan issue.

I urge you to transition  
Tacoma away from fossil fuels and embrace clean, renewable energy projects - good for Tacoma residents, good for the earth.

Thank you for the opportunity to comment. I am a near neighbor, around the corner from Tacoma, in Kirkland WA.

We need to start transitioning Tacoma away from fossil fuels or we'll be left behind and dealing with a toxic legacy when the rest of the country converts to green, renewable energy and industry. Why can't we attract a turbine manufacturer here? With the port and rail access it would be perfect for distribution.

Please remember that the City passed a climate emergency resolution. Banning fossil fuels is the next logical step. Then we need to start weaning off them, and rapidly. I noticed that the climate education promised in the Climate Emergency Resolution oddly didn't include Council Members - would be great to see you all insist on having that education for yourselves as well.

I hope you will deliver to us the fossil fuel regulations we need.

IPS Committee ,

Dear IPS Committee,

Our community has been asking the City to stop fossil fuel expansion for the past four years. We are asking yet again.

I was quite disappointed when the City Council failed to adopt the non-interim regulations as proposed by the City Planning Department. These would have included a ban on fossil fuel expansion. Just as in their first recommendation four years ago.

I also understand that some council members were poised to amend the non-interim regulations to death, and that is why the Mayor put it to a vote to send it to your committee. From my point of view, this is just further wheel spinning and delay to let industry do as it pleases. We don't need more studies or review - we know exactly what we need to do. So let's do it.

I hope you will prove me wrong by maintaining the ban on fossil fuel expansion as you do your own take on the non-interim regulations. Ideally, I'd ask that you include a ban on the establishment of any new fossil fuel industry, no matter the size (as I understand it anything under a million gallons is allowed).

Undoubtedly industry will turn to talk of biofuels to try and seek expansion of their facilities. It would be good for you to know that two refineries built for biofuels in the PNW ended up just processing fossil fuels in the end. If the fossil fuel companies are so keen to do biofuels, which are of questionable sustainability and scalability to my knowledge, then let them use whatever storage tanks they currently have. We don't want to be home to another refinery spewing toxins into our air, biofuel or not.

We need to start transitioning Tacoma away from fossil fuels or we'll be left behind and dealing with a toxic legacy when the rest of the country converts to green, renewable energy and industry. Why can't we attract a turbine manufacturer here? With the port and rail access it would be perfect for distribution.

IPS Committee ,

Dear IPS Committee,

Our community has been asking the City to stop fossil fuel expansion for the past four years. We are asking yet again. This is vital to our regional health and safety!

I was quite disappointed when the City Council failed to adopt the non-interim regulations as proposed by the City Planning Department. These would have included a ban on fossil fuel expansion. Just as in their first recommendation four years ago.

I also understand that some council members were poised to amend the non-interim regulations to death, and that is why the Mayor put it to a vote to send it to your committee. From my point of view, this is just further wheel spinning and delay to let industry do as it pleases. We don't need more studies or review - we know exactly what we need to do. So let's do it.

I hope you will prove me wrong by maintaining the ban on fossil fuel expansion as you do your own take on the non-interim regulations. Ideally, I'd ask that you include a ban on the establishment of any new fossil fuel industry, no matter the size (as I understand it anything under a million gallons is allowed).

Undoubtedly industry will turn to talk of biofuels to try and seek expansion of their facilities. It would be good for you to know that two refineries built for biofuels in the PNW ended up just processing fossil fuels in the end. If the fossil fuel companies are so keen to do biofuels, which are of questionable sustainability and scalability to my knowledge, then let them use whatever storage tanks they currently have. We don't want to be home to another refinery spewing toxins into our air, biofuel or not.

We need to start transitioning Tacoma away from fossil fuels or we'll be left behind and dealing with a toxic legacy when the rest of the country converts to green, renewable energy and industry. Why can't we attract a turbine manufacturer here? With the port and rail access it would be perfect for distribution.

Please remember that the City passed a climate emergency resolution. Banning fossil fuels is the next logical step. Then we need to start weaning off them, and rapidly. I noticed that the climate education promised in the Climate Emergency Resolution oddly didn't include Council Members - would be great to see you all insist on having that education for yourselves as well.

I hope you will deliver to us the fossil fuel regulations we need.

IPS Committee ,

Dear IPS Committee,

Our community has been asking the City to stop fossil fuel expansion for the past four years. We are asking yet again.

I was quite disappointed when the City Council failed to adopt the non-interim regulations as proposed by the City Planning Department. These would have included a ban on fossil fuel expansion. Just as in their first recommendation four years ago.

I also understand that some council members were poised to amend the non-interim regulations to death, and that is why the Mayor put it to a vote to send it to your committee. From my point of view, this is just further wheel spinning and delay to let industry do as it pleases. We don't need more studies or review - we know exactly what we need to do. So let's do it.

I hope you will prove me wrong by maintaining the ban on fossil fuel expansion as you do your own take on the non-interim regulations. Ideally, I'd ask that you include a ban on the establishment of any new fossil fuel industry, no matter the size (as I understand it anything under a million gallons is allowed).

Undoubtedly industry will turn to talk of biofuels to try and seek expansion of their facilities. It would be good for you to know that two refineries built for biofuels in the PNW ended up just processing fossil fuels in the end. If the fossil fuel companies are so keen to do biofuels, which are of questionable sustainability and scalability to my knowledge, then let them use whatever storage tanks they currently have. We don't want to be home to another refinery spewing toxins into our air, biofuel or not.

From my point of view, this is just further wheel spinning and delay to let industry do as it pleases. We don't need more studies or review - we know exactly what we need to do. So let's do it.

I hope you will prove me wrong by maintaining the ban on fossil fuel expansion as you do your own take on the non-interim regulations. Ideally, I'd ask that you include a ban on the establishment of any new fossil fuel industry, no matter the size (as I understand it anything under a million gallons is allowed).

Undoubtedly industry will turn to talk of biofuels to try and seek expansion of their facilities. It would be good for you to know that two refineries built for biofuels in the PNW ended up just processing fossil fuels in the end. If the fossil fuel companies are so keen to do biofuels, which are of questionable sustainability and scalability to my knowledge, then let them use whatever storage tanks they currently have. We don't want to be home to another refinery spewing toxins into our air, biofuel or not.

We need to start transitioning Tacoma away from fossil fuels or we'll be left behind and dealing with a toxic legacy when the rest of the country converts to green, renewable energy and industry. Why can't we attract a turbine manufacturer here? With the port and rail access it would be perfect for distribution.

Please remember that the City passed a climate emergency resolution. Banning fossil fuels is the next logical step. Then we need to start weaning off them, and rapidly. I noticed that the climate education promised in the Climate Emergency Resolution oddly didn't include Council Members - would be great to see you all insist on having that education for yourselves as well.

I hope you will deliver to us the fossil fuel regulations we need.

IPS Committee ,

Dear IPS Committee,

Our community has been asking the City to stop fossil fuel expansion for the past four years. We are asking yet again.

I was quite disappointed when the City Council failed to adopt the non-interim regulations as proposed by the City Planning Department. These would have included a ban on fossil fuel expansion. Just as in their first recommendation four years ago.

I also understand that some council members were poised to amend the non-interim regulations to death, and that is why the Mayor put it to a vote to send it to your committee. From my point of view, this is just further wheel spinning and delay to let industry do as it pleases. We don't need more studies or review - we know exactly what we need to do. So let's do it.

I hope you will prove me wrong by maintaining the ban on fossil fuel expansion as you do your own take on the non-interim regulations. I was quite disappointed when the City Council failed to adopt the non-interim regulations as proposed by the City Planning Department. These would have included a ban on fossil fuel expansion. Just as in their first recommendation four years ago.

I also understand that some council members were poised to amend the non-interim regulations to death, and that is why the Mayor put it to a vote to send it to your committee. From my point of view, this is just further wheel spinning and delay to let industry do as it pleases. We don't need more studies or review - we know exactly what we need to do. So let's do it.

I hope you will prove me wrong by maintaining the ban on fossil fuel expansion as you do your own take on the non-interim regulations. Ideally, I'd ask that you include a ban on the establishment of any new fossil fuel industry, no matter the size (as I understand it anything under a million gallons is allowed).

Undoubtedly industry will turn to talk of biofuels to try and seek expansion of their facilities. It would be good for you to know that two refineries built for biofuels in the PNW ended up just processing fossil fuels in the end. If the fossil fuel companies are so keen to do biofuels, which are of questionable sustainability and scalability to my knowledge, then let them use whatever storage tanks they currently have. We don't want to be home to another refinery spewing toxins into our air, biofuel or not.

We need to start transitioning Tacoma away from fossil fuels or we'll be left behind and dealing with a toxic legacy when the rest of the country converts to green, renewable energy and industry. Why can't we attract a turbine manufacturer here? With the port and rail access it would be perfect for distribution.

Please remember that the City passed a climate emergency resolution. Banning fossil fuels is the next logical step. Then we need to start weaning off them, and rapidly. I noticed that the climate education promised in the Climate Emergency Resolution oddly didn't include Council Members - would be great to see you all insist on having that education for yourselves as well.

I hope you will deliver to us the fossil fuel regulations we need.

IPS Committee ,

Dear IPS Committee,

We are tired of this nonsense.

Our community has been asking the City to stop fossil fuel expansion for the past four years.

How about you stop pretending that protecting specific, health-harming, climate killing businesses is more important than the survival of our grandkids.

I heard the most recent bullshit excuse is that you're scared JBLM will want to close if you put a cap on fossil fuel expansion. (Insert laughing emoji here) Please share with the public the actual letters from high ranking JBLM officials stating this if that's the case--oh they haven't officially commented?--yet we are gonna entertain the narrative anyway. (Insert clown face emoji)

We have less than 10 years to kick our fossil fuel addiction and you know it. If your family's house caught on fire and you had just 10 minutes to evacuate them and anything you wanted to save from burning- would you spend the first 4 of those minutes debating how bad the fire could get, how it might inconvenience your climb up the elected official ladder if you were seen rushing about responding to the emergency?

Would you spend the next minute convening a committee, half full of people denying that the fire is actually a big deal? Will you decide to call in an emergency and get people working to put out the fire?

What then with your remaining 5 minutes? The delay means you no longer have time to save everything you would like to, and that the path to your children's rooms are now a gauntlet of fire. Its still possible to save them, but their home will never be the comfortable one you grew up in. Its burning to the ground.

Yet you watch from the committee table, debating about how much it would cost to spray water on the fire, and if the army base down the street would be mad about you using the water--I mean afterall, holding their favor is so important--it's worth taking the time and not rushing to a decision.

Tick tock, tick tock, 4 mintes left and in the background you can start to hear the screams of the children, and see the burnt bodies of your family pets emerge from broken windows to collapse and perish on lawn. Half the committee thinks the best use of time is to hide the evidence of the charred animals and prepare a statement for the media. The screams are more frantic. The fire has spread and more houses are starting to burn. You are reaching the tipping point where there will be no stopping the fire, it will consume the neighborhood, the

park, the school, the precious army base.

3 minutes left. You snap out of your distorted reality, remember that you love your children above all else, yet the emergency is now so bad, you can no longer run in the front door for your children. You realize you can no longer hear their screams.

You spend the final 2 minutes in soul-crushing agony as the weight of what your delay has cost finally sinks in. You choke on smoke, the heat is intense, but not as intense as your guilt, your shame, your regret.

This doesn't have to be our reality. We still have a short window of time to deal with the emergency, and sustain some damage while avoiding total loss.

The choice is yours.

I was quite disappointed when the City Council failed to adopt the non-interim regulations as proposed by the City Planning Department. These would have included a ban on fossil fuel expansion. Just as in their first recommendation four years ago.

I also understand that some council members were poised to amend the non-interim regulations to death, and that is why the Mayor put it to a vote to send it to your committee. From my point of view, this is just further wheel spinning and delay to let industry do as it pleases. We don't need more studies or review - we know exactly what we need to do. So let's do it.

I hope you will prove me wrong by maintaining the ban on fossil fuel expansion as you do your own take on the non-interim regulations. Ideally, I'd ask that you include a ban on the establishment of any new fossil fuel industry, no matter the size (as I understand it anything under a million gallons is allowed).

Undoubtedly industry will turn to talk of biofuels to try and seek expansion of their facilities. It would be good for you to know that two refineries built for biofuels in the PNW ended up just processing fossil fuels in the end. If the fossil fuel companies are so keen to do biofuels, which are of questionable sustainability and scalability to my knowledge, then let them use whatever storage tanks they currently have. We don't want to be home to another refinery spewing toxins into our air, biofuel or not.

We need to start transitioning Tacoma away from fossil fuels or we'll be left behind and dealing with a toxic legacy when the rest of the country converts to green, renewable energy and industry. Why can't we attract a turbine manufacturer here? With the port and rail access it would be perfect for distribution.

Please remember that the City passed a climate emergency resolution. Banning fossil fuels is the next logical step. Then we need to start weaning off them, and rapidly. I noticed that the climate education promised in the Climate Emergency Resolution oddly didn't include Council Members - would be great to see you all insist on having that education for yourselves as well.

I hope you will deliver to us the fossil fuel regulations we need.
